WELCOME HOME TO WARMTH

How to Choose an Indoor Fireplace

Wood, gas or electric?

Where & why?

Where the fireplace will be installed will help to determine the fireplace type. Is it going in the living room or possibly a bedroom? What about access to fuel supply? Can it be vented or would a vent-free fireplace be a better solution? Why am I adding a fireplace? Is it for supplemental heat to help save on energy costs or have source of heat if power fails? Is it to be the centerpiece and visual presentation for a particular room? Understanding the where and why will ultimately lead you to what fireplace is right for you.

Wood, gas or electric?

Wood

When it comes to fireplaces it's hard to surpass the true burn of a wood burning fireplace. The rustic smells, crackling sounds and vibrant yellow flames of a wood burning fire cannot be duplicated. With realism comes maintenance, though – wood burning fireplaces require ash cleanup and chimney maintenance. Heating efficiency – percentage of heat generated from the fireplace that is dispersed to the living areas vs. dispersed out the chimney – varies with wood fireplaces. Keep in mind that you can eliminate maintenance and improve heating efficiencies for your wood burning fireplace by simply replacing real firewood with a Comfort Flame™ gas log set.

Gas

Heating with gas has various attributes to consider as well. Gas fireplaces, which are available in Natural Gas (NG) or Liquid Propane (LP), are considered to be “clean-burning”, meaning that these fireplaces emit minimal pollutants and do not produce ash or soot residue. Gas fireplaces are available in either Direct Vent or Vent-Free configurations.

Direct vent gas fireplaces utilize a glass-enclosed combustion chamber and bring in outside air. This process of bringing outside air in and exhausting combustion gas is done via a double wall (pipe within a pipe) venting system. Heating efficiency varies with direct vent gas fireplaces.

Vent-free gas fireplaces utilize inside air to heat the home. Since vent-free fireplaces do not use venting systems to circulate outside air, almost no heat is lost - resulting in a 99.9% efficiency rating.

Gas fireplaces are often paired with remote controls to provide convenience when powering the fireplace on/off and operating various features like flame height, thermostat settings and interior lighting.

Electric

Electric fireplaces are typically a “plug-and-play” application. These fireplaces require a standard 110v (220v in some cases), 3-prong electrical outlet and minimal installation. Electric fireplaces use bulb or LED lighting to create the illusion of a burning fireplace. Keep in mind LED lighting options allows for multiple color choices. Typically, electronic fireplaces can be used in any room of the home - unless restricted by local authorities.

What other factors should be considered?

Always check with your local authorities to ensure the type of fireplace you want is allowed. Some areas prohibit installation and use of vent-free gas fireplaces. Some areas may only permit the use of EPA-certified wood fireplaces. Also check your local municipalities and Home Owner's Association for any specific codes or guidelines with regard to fireplace gas lines, chimney pipe and terminations.

Just to be safe...

Always read instructions and safety information as well as check local fire codes before installation. It is always recommended to seek professional installation for fireplaces.

MADISON (A)

DIRECT VENT GAS FIREPLACES

Direct vent gas fireplaces utilize outside air and thus have no impact on inside air quality. Traditional and contemporary models are available to complement any decor.

FEATURES

- Durable textured powder coat finish
- Smooth face design
- 2015 ANSI Barrier Compliant
- Uses IHP SV 4.5 Vent Pipe

AURORA (B)

SEQUOIA VENTED GAS LOGS

It's easy to see how the Sequoia's elaborately hand-crafted log stack and radiant ember bed could be mistaken for a real wood burning fire.

Complete with authentic wood tones and deep charred wood patterns. Gas log control assembly is tucked away out of view.

A brightly burning loose ember presentation in a vented gas log set can only be achieved through industry-leading design and precise fuel combustion. The high efficiency optional MFEB ember bed creates a burner system that maximizes the beauty of the log set.

For use with Belmont or oversized masonry fireplaces only.

SEQUOIA

8 cast refractory logs.

How to Choose an Outdoor Fireplace

Wood or gas?

The fuel you choose to burn will affect your product selection. There are benefits to both wood and gas, but the choice comes down to what works best for you and your space.

Why wood?

Everyone loves to throw another log into the fireplace, roast marshmallows and listen to the sound of crackling flames. The sensory and nostalgic appeal of a wood burning fireplace simply cannot be duplicated. For some, the authenticity of gathering firewood and disposing of ashes is unparalleled. So if you seek to capture the rustic essence of a fireplace, then a wood burning fireplace is the right choice for you.

Why gas?

Quick and easy to light and shut off, gas burning fires do not need to be maintained and can be used for short evenings or long nights around the fire. There are no ashes, smoke or flying embers - making gas fireplaces safe and clean to operate.

If you seek the convenience of operating your fireplace with the push of a button, then a gas fireplace may be suited for you. Most gas fireplaces are equipped with either wall-mounted controls or a remote control that allows you to power your fireplace on/off and control its flames, thermostat, blower and interior lighting. Gas fireplaces require either Natural Gas (NG) or Liquid Propane (LP) and an elaborate installation and venting system for proper operation.

Just to be safe...

Always read instructions and safety information as well as check local fire codes before installation. It is always recommended to seek professional installation for fireplaces.

SAVANNAH (A) - GAS

OUTDOOR FIREPLACES

Outdoor fireplaces from Comfort Flame™ can transform an outdoor setting into a gathering place of comfort. We offer unique models that are easy to install, built-to-last and designed to be the warm centerpiece for your outdoor entertaining.

FEATURES

- White stacked brick styled panels
- Heavy duty stainless steel log grate
- 20 year limited warranty

Comfort Flame[™]
WELCOME HOME TO WARMTH

- Flames burn in a sealed firebox.
- Outside air is drawn to the burners through an outer pipe- exhaust gases are expelled through a smaller inner pipe.
- Room air is heated as it circulates through passageways around the firebox, then is emitted through the top, front fireplace opening.
- The flames & glowing embers also radiate heat through the glass into the room.

Direct Vent Gas
